

Designer brief

Everything you need to build a deck about Campus Bond — what it is, what actually works today, and the design system it already runs on.

Working prototype · not released

React Native / Expo + MERN

31 screens

~9,800 lines

THE PRODUCT

One campus, one app — instead of forty WhatsApp groups

Campus Bond is a mobile app for a single university. Everything students currently scatter across department WhatsApp groups — finding hackathon teammates, selling a used drawing kit, chasing lost earbuds, joining a society — happens in one verified, searchable place.

The problem it targets is **fragmentation**. A third-year CSE student looking for a frontend developer has no way to reach second-year IT students. A first-year selling last semester's textbooks can only reach their own hostel group. Information dies inside whichever group it was posted to.

Access is gated by **college email + OTP**, so every profile carries a real branch and semester. That verification is the foundation: it is what makes a stranger's post trustworthy enough to act on.

The signature idea, worth its own slide: nothing on Campus Bond is a cold DM. You raise your hand on a post, the poster reviews it, and only then does a private chat open between you. The same approval gate governs buying an item and joining a club. It is what keeps a campus-wide app from becoming a spam channel.

WHERE IT STANDS

be accurate in the deck

This is a **functional prototype**, not a launched product. It runs on a phone through Expo Go against a local MongoDB. It has not been to an app store, has no real users, and the content in it is seeded demo data. It does compile to a production Android bundle.

Please don't put download counts, ratings or user numbers on a slide. The honest framing — "a working prototype of every core flow, built solo" — is the stronger story for a student project anyway.

AREA	STATE	WHAT THAT MEANS
Verified sign-up	WORKING	Email → OTP → account, JWT sessions, profile with avatar
Home feed	WORKING	Team posts, notices and lost & found in one filterable stream
Campus Market	WORKING	Listings with photos, category carousels, buy requests, orders
Clubs	WORKING	Applications with consent, president review, membership
Lost & Found	WORKING	Report with photo, browse, mark resolved
Messaging	WORKING	1-to-1 chat, opened only by an accepted request
Light + dark theme	WORKING	Full dual palette, toggled from the profile, remembered
Campus Map	PLANNED	Placeholder screen only
Campus Score	PLANNED	Field exists on the user, no scoring rules yet
Contests · Q&A · Past papers · Placement · SOS	PLANNED	Named on the roadmap, not built

Four features, one shared pattern

Home feed

One stream mixing three kinds of post — **team** requests, campus **notices**, and **lost & found**. Filter chips narrow it; a “For you / Campus” switch separates your branch from everyone. Each card carries a coloured kind badge, the author's branch and semester, and an Interested button.

Campus Market

Second-hand books, notes, drawing kits, electronics, instruments, furniture. Browsed as horizontal carousels per category with See All, in the pattern of a shopping app. Buy sends a request; the seller accepts; a chat opens. Buyers track everything under My orders, sellers under My listings.

Clubs

Split into **My clubs** and **Explore our clubs**. Joining is a real application — you review the details that will be shared, write why you want in, tick a consent box, and it goes to the club president to accept or decline. Each category has its own colour and hand-drawn doodle.

Lost & Found

Report something lost or found with a photo, a place and a contact. It appears in the main feed alongside posts rather than hiding in its own tab, because a lost ID card needs the whole campus to see it, fast.

KEY FLOWS

each one is a slide

Getting in — verified, once

- 01** Enter name, college email, password, branch, semester
No account is created yet — the details are held against the one-time code
- 02** A 6-digit code arrives by email
Expires in 10 minutes, 5 attempts, then it is gone
- 03** Code verified → account created, signed in
The profile now carries a real, verified branch and semester

Finding a teammate — the approval gate

01 A student posts “Need a frontend dev for a fintech hack”

02 Another student taps **Interested**

One tap. No message to compose, no profile to hunt down

03 A private chat opens with an intro message already sent

The poster sees who is interested and their branch

Joining a club — consent, then review

01 Review exactly what the club will see

Name and email shown read-only; branch and semester editable

02 Say why you want to join, add skills, tick consent

All three are required — no silent one-tap joining

03 The president accepts or declines from their review inbox

Only an accept adds you to the club

THE DESIGN SYSTEM

Ink & copper

Use this palette in the deck

The app runs on a system called **Ink & copper** — slate ink as the primary, copper as the single accent, cool neutrals, white surfaces. This page is built in it, so what you are reading is the brand. Please don't introduce a second accent colour for the slides.

Typography

Two families, both free on Google Fonts. Instrument Sans carries everything readable; JetBrains Mono is reserved for labels, counters and initials — never body text.

Component grammar

ELEMENT

TREATMENT

Card	White, 18px radius, two-layer shadow. On dark, shadow is replaced by a hairline border.
Action bar	Every card ends in a tinted strip above a hairline — the button lives there, never floating on the card body.
Buttons	Fully rounded pills. Filled = primary action, outlined = secondary.
Badges	7px radius, mono uppercase, soft tinted background of its kind colour.
Avatars	Initials on a tinted circle. There are no profile photos anywhere in the design.
Section rule	Mono copper label + hairline + a count on the right. Used for “TODAY” in the feed — and for every section on this page.
Bottom bar	Text labels only with a 4px dot under the active tab, 26px rounded top corners, a slate circle for the centre action.
Doodles	Faint hand-drawn line art at ~10% opacity — a circuit for tech clubs, a palette for arts. The only decorative flourish in the system.

SCREEN MAP

31 screens

Five tabs: **Home** · **Club** · **+** · **Market** · **More**. The centre button posts — and it is context-aware, opening the lost-item form when the feed is filtered to Lost & Found. Campus Map and the old tile dashboard exist but are reached from the profile rather than the bar.

consent form

Lost & Found feed + report	Messages list + chat	Notifications who is interested
Profile + theme toggle	Sign up · OTP · Login three screens	Campus Map placeholder

UNDER THE HOOD

only if the deck needs it

LAYER	BUILT WITH
Mobile app	React Native 0.81 · Expo SDK 54 · React 19
Navigation	React Navigation 7 – tabs + native stacks
Graphics	react-native-svg – every icon is hand-drawn, no icon font
API	Node.js · Express 4 · 6 route groups
Database	MongoDB · Mongoose · 8 models
Auth	Email OTP (bcrypt-hashed) · JWT · SecureStore
Uploads	Multer → served from the API

Data models: User, Otp, Event (posts), MarketItem, LostItem, Club, Conversation, Message. Current demo content: 8 clubs, 30 market listings, 5 posts, 3 lost items, 3 accounts.

LANGUAGE

Names to keep consistent

SAY	NOT
Campus Bond	CampusBond, Campus-Bond
Campus Market	Marketplace, Shop, Store
Clubs	Societies, Groups
Lost & Found	Lost items

SAY	NOT
Interested	Apply, Request, Join
Request to join	Join now — joining is never instant
President	Admin, Owner
Branch · Semester	Major, Year

Tone across the app is plain and warm — “Nothing reported yet”, “Say hello”, “That is everything for now”. No exclamation marks, no jargon, no apologies. Keep the deck in the same register.

SUGGESTED DECK 12 slides

01 Title

Wordmark on the slate ground. Nothing else.

02 The problem

One campus, forty group chats. Information dies where it was posted.

03 The idea

One verified place for the whole campus.

04 Verified by design

College email + OTP. Every profile has a real branch and semester.

05 The approval gate

The signature mechanic — raise a hand, get accepted, then chat. Worth a diagram.

06 Home feed

Screenshot. Three kinds of post in one stream.

07 Campus Market

Screenshot. Carousels, photos, buy requests.

08

Clubs

Screenshot of the application flow — consent is the story here.

09

Design system

Ink & copper: palette, type, one card dissected.

10

Light and dark

Same screen, both themes, side by side.

11

Built so far

The honest status table. Working vs planned.

12

What's next

Campus Map, Campus Score, contests, past papers, placement, SOS.

BEFORE YOU START

Ask me for

- **Fresh screenshots** — I can produce any screen in both light and dark. Don't work from the older screenshots; the design has changed a lot.
- **The two typefaces** — Instrument Sans and JetBrains Mono, both free from Google Fonts.
- **Exact hex values** — everything on this page is copy-pasteable, but ask if you need a token that isn't listed.
- **The doodle set** — the club line-art motifs, if you want them as slide decoration.

Please avoid

- Inventing a second accent colour, or a gradient. The system is deliberately one accent on cool neutrals.
- Stock photos of students. The app itself uses zero photography of people — initials only.
- Any claim about users, downloads or revenue. There are none yet.
- Drop shadows heavier than the app's own, or hard black. The darkest value in the system is #171B1D.
